Indonesian Citizen in Kuala Lumpur, MY

Open to international opportunities; VISA sponsorship will be required for employment outside Indonesia.

Education & Certificates

- Bachelor of Applied Information Systems — 2024
  Politeknik Negeri Media Kreatif. — *Jakarta, Indonesia*
- Student Exchange in Artificial Intelligence — 2024
  University of Missouri-Kansas City — *Missouri, USA*

Work History

AI Engineer at Ebdesk Malaysia Sdn Bhd, Selangor. — *Aug 2024 to Current*

- Designed and engineered AI powered solutions based on client's problem statements and requirements. Constructed custom LLM pipelines and ML Model's, using Python, Langchain, Langgraph and Pytorch. Deployed with FastAPI and Docker for the Backend and React Js for the Frontend.
- Constructed data ingestion pipeline ETL, from raw data lake into data warehouse using Python and Pandas with Apache Spark for large scale parallel processing. Designed the database and stored the data in PostgreSQL, Elasticsearch and Qdrant vector database.
- Trained and fine-tuned ML Models such as OCR, Object Detection, Segmentation and Classification for vision related solutions such as Document Extraction and Video Analytics. Using Pytorch, Tesseract OCR, Docling and YOLO models. Evaluated based on metrics such as Precision, Recall, mAP, and F1 Score.
- Architected Agentic Systems using the pre designed internal data source, using both Local vLLM and Hosted LLM. Utilizing Langchain, Langgraph, RAG and custom or prebuilt MCP tools. Deployed using Docker and FastAPI in an OpenAI-compatible API interfaces.
- Designed and visualize the solutions using Data Visualization tools such as Tableau, and Web app framework using React JS, HTML, CSS and Javascript.
- Presented solutions to non-technical stakeholders and clients, primarily government officials and public-sector representatives.
- Utilized agentic coding tools, including Claude Code, Codex, and OpenCode with locally inferenced LLMs, to streamline development workflows and improve productivity.
- Managed and maintained internal services and application deployments on Linux servers using SSH and Supervisor, including process monitoring, service restarts, configuration updates, and basic troubleshooting.

Web Developer Freelance *Mar 2024 to Current*

- Designed and Engineered Fullstack web application based on client idea and needs, primarily using Javascript based backend such as Nest JS and Express with React based frontend such as React Js and Next Js, Deployed and registered the website to be accessible to public using VPS, Cloud or Shared Hosting.
- Developed the mockup and frontend following the user idea or given Figma prototype from UI/UX Developer, using React Js, Next Js, Tailwind, Shadcn, with Custom CSS and Animation.
- Architected the system design and engineered the Backend utilizing Javascript based framework such as Nest Js and Express Js
- Design the database based on the app necessity using both SQL or NoSQL in VPS or Cloud environment such as PostgreSQL, MongoDB and Supabase.
- Registered domains, deployed websites, manage SEO using VPS, Shared hosting or Cloud based on Client’s Requirements.
